

BIO-CNG

YOUR WASTE, OUR FUEL

Bio-CNG is a 100% clean and circular fuel, made of biodegradable waste like sewage treatment and organic waste. Bio-CNG is an affordable transitional fuel, given the limited availability of EV's and the development time required by H2.

Bio-CNG is an eco-friendly, viable, and affordable alternative for passenger vehicles, business vehicles, trucks, and busses.

MANUFACTURING PROCESS

REDUCTIONS

Driving on Bio-CNG results in significant reductions towards petrol

-  Up to 90% CO2 reduction
-  Up to 90% less emission of nitrous oxide
-  Up to 95% less emission of particulate matter
-  Up to 95% less sulphur oxides
-  Up to 50% less noise and vibrations
-  Up to 70% waste reduction

**Bio-CNG is fully circular within the waste industry. Waste collection vehicles collect (organic) waste. This is processed into Bio-CNG which the collection vehicles then drive on*
