

HYDROGEN

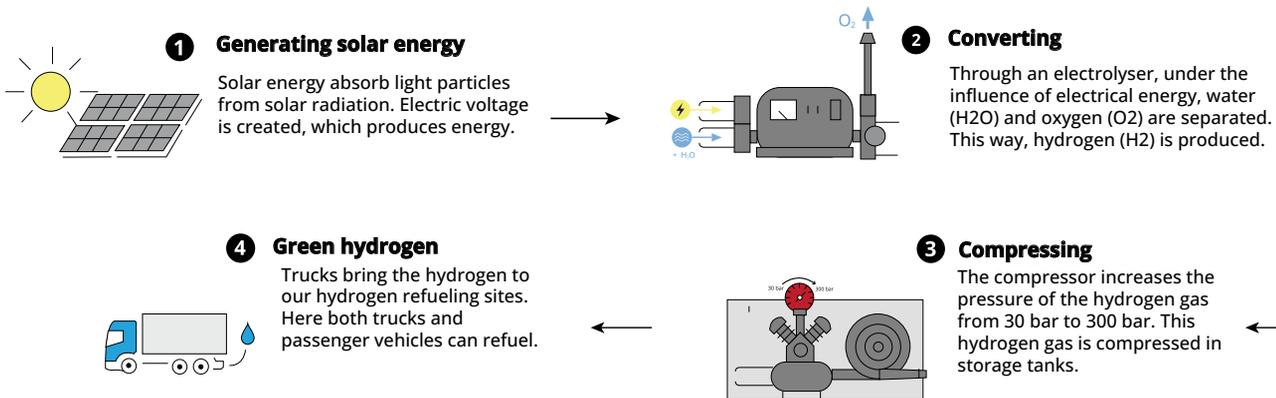

ZERO EMISSION ON THE MOVE

Hydrogen is a highly circular and environmentally friendly source of energy. When produced out of overcapacity, with natural elements such as wind and sun, hydrogen is completely green and avoids energy waste.

As a zero-emission fuel, hydrogen offers an ideal solution for heavy transport, lease drivers, public transport and for taxi companies driving long distances.

MANUFACTURING PROCESS

REDUCTIONS

Hydrogen driving results in significant reductions compared to diesel/petrol

-  100% CO₂-reduction
-  100% less nitrous oxide
-  Up to 50% less noise and vibration
-  Virtually no emission of sulphur oxides
-  No production of particulate matter

**The above percentages only apply when driving on green hydrogen produced from renewable sources.*
